

RANGE CONSERVATION TECHNICAL NOTES

Range Technical Note No. 70

RE: Potential Natural Vegetation Map

This range technical note transmits the "Potential Natural Vegetation Map" New Mexico Interagency Range Committee Report No. 11.

A subsequent report will explain the classification system which can be used for preparing larger scale maps of potential or present vegetation of counties, districts, watersheds, RC&D areas, etc.

As more detailed information is available, refinements will be made to this map for a revised printing.

Additional copies of the map are available from the Plant Sciences section in the state office.
